                                                                            ALTERNATIVE PRODUCTS: THREE FORMS (VEGF-1, VEGF-2 AND VEGF-3) ARE PRODUCED AS, A RESULT OF ALTERNATIVE SPLICING OF THE SAME GENE. TH LONGEST FORM (VEGF-3, SHOWN HERE) CONTAINS A BASIC INSERT LINKED TO CELL-ASSOCIATION/HEPARIN-BINDING.

TISSUE SPECIFICITY: IN DEVELOPING EMBRYOS, EXPRESSED MAINLY IN THE CHOROLD PLEXUS, PARAVENTRICULAR NEUTROEDITHELIUM, PLACENTA AND KIDNEY GLOMERULI. ALSO FOUND IN BRONCHIAL EPITHELIUM, ADDENAL GLAND AND IN SEMINIFEROUS TUBULES OF TESTIS. HIGH EXPRESSION OF VEGF CONTINUES IN KIDNEY GLOMERULI AND CHOROLD PLEXUS IN ADULTS.
SIMILARITY: BELONGS TO THE POGF/VEGF FAMILY OF GROWTH FACTORS.

ALTERNATIVE PRODUCTS: THREE ISOFORMS (VEGF-190, VEGF-146 AND VEGF
166) ARE PRODUCED AS A RESULT OF ALTERNATIVE SPLICING OF THE SAME
GENE. THE LONGER FORM CONTAINS A BASIC INSERT WHICH ACTS AS A CEI
RETENTION SIGNAL.

TISSUE SPECIFICITY: ABUNDANTLY AND EQUALLY EXPRESSED IN HEART ANT
TISSUE SPECIFICITY: ABUNDANT THAN THE VEGF-166 FORM IS
5- TO 10- TIMES MORE ABUNDANT THAN THE VEGF-190 FORM.

DEVELOPMENTAL STAGE: THE VEGF-166 FORM IS EXPRESSED EARLY AT DAY
AND IS UPGRADED DURING GASTRULATION. EXPRESSION OF THE VEGF-190
FORM IS UPGRADED DURING GASTRULATION. EXPRESSION OF THE VEGF-190
FORM IS UPGRADED DURING GASTRULATION. EXPRESSION OF THE VEGF-190
FORM IS UPGRADED DURING GASTRULATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ferentiation in the quail embryo.";
Biol. 169:699-712(1995).
FUNCTION: GROWTH FACTOR ACTIVE IN ANGIOGENESIS,
CELL GROWTH. INDUCES ENDOTHELIAL PROLIFERATION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FORM IS DETECTABLE ONLY FROM DAY 2. SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PERMEABILITY
